Yes, there are a few tools that can convert code to ER diagrams. Some of the most popular ones include:

- DBDiagram is a free online tool that allows you to create ER diagrams by writing code. You can use its own database markup language to create your diagram, and SQL statements will be generated to create your database tables. You can also export your diagrams to images or PDFs.
- Lucidchart is a popular diagramming tool that also has an ER diagramming feature. You can create ER diagrams from scratch using templates and symbols, or you can import your existing database to create the diagram. Lucidchart also allows you to collaborate on diagrams with others.
- ERDPlus is a web-based tool that allows you to create ER diagrams, relational schemas, and star schemas. You can also export your diagrams to SQL DDL statements.
